very record.json stored in this folder, so a later one-PR run cannot narrow it.

Needs a decision first

- **COULD NOT VERIFY**: pyinvoke/invoke#1097: Use command-line names in missing-argument errors
. Could not verify: claim(s) C1, C2, C4 expect a difference but no observation matches (134 tes
t(s) ran on main, 137 on the PR; 3 new test(s) pass, 135 unchanged (1 of them skipped on both s
ides); probe model-p1 is not_adequate (the probe crashed or printed no parsed output on every m
ain-side run; not counted as ran or adequate); its matching results do not count)
- **COULD NOT VERIFY**: Delgan/loguru#1515: Evaluate every rotation condition so a skipped one
cannot fire spuriously. Install failed (1); see setup-pr.log
