Reviewer report: pyinvoke/invoke#1097: Use
command-line names in missing-argument errors
Run invoke-1097, tested 2026-11-05 11:38 IST by ops/daily_run.py (route source-pair).
Proof-of-Change commit
985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by
reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential p
robes
shown,
informational)).
COULD NOT VERIFY
Recommended action: Re-run Confidence: Low
The run did not produce a usable comparison, so there is no conclusion about the PR. The run di
d
not finish
cleanly, so it says nothing about the PR.
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.
Summary in plain English
? What it says it does: Use command-line names in missing-argument errors
(pyinvoke/invoke#1097).
? What we observed: could not verify: claim(s) C1, C2, C3 expect a difference but no observatio
n
matches (134
test(s) ran on main, 137 on the PR; 3 new test(s) pass, 135 unchanged (1 of them skipped on
h
sides);
rejected: claim pattern(s) C1, C2, C3 match none of this probe?s observation names, so the prob
e is
not
counted).
? What you should do: Do not decide yet. Fix the problem under ?How to fix? and run the check
again.
Demo helper
These notes are background from the console and the daily check. They do not change the verdict
.
If setup fails, the helper retries the install up to 2 times. If a test still can?t be verified
because
something is
missing or fails to import, it looks up the cause, installs the fix on both sides and reruns th
at step, up
to 3 tries.
