Reviewer report: mahmoud/boltons#728: Preserve independent capture groups in MultiReplace
Run boltons-728, tested 2026-11-04 12:11 IST by ops/daily_run.py (route source-pair).
Proof-of-Change commit 985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential probes shown, informational)).
NEEDS ATTENTION
Recommended action: Reject Confidence: Medium
The run is trustworthy and found a difference a person should look at. Some checks gave warnings:
Probes ran on both sides; Every claim cites a real log line
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.

Summary in plain English
? What it says it does: Preserve independent capture groups in MultiReplace (mahmoud/boltons#728).
? What we observed: probe: 11 observation(s) need attention: c11.test_result differs although the claim says it does not (C11); c12.production_logic differs although the claim says it does not (C12); c13.git_diff_check_passed differs although the claim says it does not (C13); c3_combined_order1 differs although the claim says it does not (C3); probe model-probe1 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count; tests: 4 test(s) fail on main and pass on the PR; 37 test(s) ran on main, 68 on the PR; 31 new test(s) pass, 33 unchanged.
? What you should do: Do not approve as is. Read 'What changed in behavior' and decide with the PR author.

Demo helper
These notes are background from the console and the daily check. They do not change the verdict.

If setup fails, the helper retries the install up to 2 times. If a test still can't be verified because something is missing or fails to import, it looks up the cause, installs the fix on both sides and reruns that step, up to 3 tries.
? Setup check: GitHub token: present.
? Setup check: Nebius token: present.
