Reviewer report: mahmoud/boltons#731: Copy the function body in FunctionBuilder.from_func
Run boltons-731, tested 2026-11-04 12:05 IST by ops/daily_run.py (route source-pair).
Proof-of-Change commit 985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential probes shown, informational)).
COULD NOT VERIFY
Recommended action: Re-run Confidence: Low
The run did not produce a usable comparison, so there is no conclusion about the PR. The run did not finish cleanly, so it says nothing about the PR.
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.

Summary in plain English
? What it says it does: Copy the function body in FunctionBuilder.from_func (mahmoud/boltons#731).
? What we observed: unverified behaviour claim: "All other from_func fields are assembled exactly as before, and update_wrapper ? the one internal caller ? is unaffected since it unconditionally overwrites fb.body with its invocation body." (+1 more); needs a probe (7 test(s) fail on main and pass on the PR; 30 test(s) ran on main, 36 on the PR; 6 new test(s) pass, 23 unchanged; probe model-c1 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count; probe model-c2 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count; probe model-c3 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count; probe model-c4 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count).

? What you should do: Do not decide yet. Fix the problem under ’How to fix’ and run the check again.

Demo helper
These notes are background from the console and the daily check. They do not change the verdict.
If setup fails, the helper retries the install up to 2 times. If a test still can’t be verified
