Reviewer report: python-jsonschema/jsonschema#1459:
Fix multipleOf with integer-valued float for large integers
Run jsonschema-1459, tested 2026-11-04 11:54 IST by ops/daily_run.py (route source-pair).
Proof-of-Change
commit 985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by
reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential probes
shown,
informational)).
COULD NOT VERIFY
Recommended action: Re-run Confidence: Low
The run did not produce a usable comparison, so there is no conclusion about the PR. The run did
not finish
cleanly, so it says nothing about the PR.
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.

Summary in plain English
? What it says it does: Fix multipleOf with integer-valued float for large integers (python-jsonschema/jsonschema#1459).
? What we observed: not verified: no AI-written probe ran any changed line, so the change itself was
not
exercised by a probe; 304 test(s) ran on main, 305 on the PR; 1 new test(s) pass, 304 unchanged.
? What you should do: Do not decide yet. Fix the problem under ’How to fix’ and run the check again.

Demo helper
These notes are background from the console and the daily check. They do not change the verdict.
If setup fails, the helper retries the install up to 2 times. If a test still can’t be verified because
something is
missing or fails to import, it looks up the cause, installs the fix on both sides and reruns that step, up
to 3 tries.
? Setup check: GitHub token: present.
? Setup check: Nebius token: present.
? Setup check: free memory 9.4 GB (of 15.6 GB).
? Setup check: free disk 94.9 GB.

? Demo helper: git is installed.
? Demo helper: python3 is installed.
? Demo helper: uv is installed.
? Looked up with Tavily: [redacted] results
? Query: jsonschema python setup install instructions
