Reviewer report: Delgan/loguru#1531: Raise ValueError for a negative or NaN size rotation
Run loguru-1531, tested 2026-11-05 10:22 IST by ops/daily_run.py (route source-pair).
Proof-of-Change commit 985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential probes shown, informational)).
COULD NOT VERIFY
Recommended action: Re-run Confidence: Low
The run did not produce a usable comparison, so there is no conclusion about the PR. The run did not finish cleanly, so it says nothing about the PR.
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.

Summary in plain English
? What it says it does: Raise ValueError for a negative or NaN size rotation (Delgan/loguru#1531).
? What we observed: not verified: no AI-written probe ran any changed line, so the change itself was not exercised by a probe; 7 test(s) fail on main and pass on the PR; 157 test(s) ran on main, 157 on the PR; 0 new test(s) pass, 153 unchanged (3 of them skipped on both sides).
? What you should do: Do not decide yet. Fix the problem under ’How to fix’ and run the check again.

Demo helper
These notes are background from the console and the daily check. They do not change the verdict.
If setup fails, the helper retries the install up to 2 times. If a test still can’t be verified because something is missing or fails to import, it looks up the cause, installs the fix on both sides and reruns that step, up to 3 tries.
? Setup check: GitHub token: present.
? Setup check: Nebius token: present.
? Setup check: free memory 11.4 GB (of 15.6 GB).
? Setup check: free disk 94.8 GB.

? Demo helper: git is installed.
? Demo helper: python3 is installed.
? Demo helper: uv is installed.
? Looked up with Tavily: [redacted] results
