Reviewer report: pytoolz/toolz#653: Preserve Placeholder binding when currying partial objects
Run toolz-653, tested 2026-11-05 11:42 IST by ops/daily_run.py (route source-pair).
Proof-of-Change commit 985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential probes shown, informational)).
NEEDS ATTENTION
Recommended action: Reject Confidence: Medium
The run is trustworthy and found a difference a person should look at. Some checks gave warnings:
Probes ran on both sides; Every claim cites a real log line
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.

Summary in plain English
? What it says it does: Preserve Placeholder binding when currying partial objects (pytoolz/toolz#653).
? What we observed: probe: 1 observation(s) need attention: c3.eq_raised does not differ although the claim says it does (C3); probe: claim(s) C2 proven; probe model-probe1 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count; tests: 7 new test(s) skipped on the PR (they did not exist before; listed, not a finding); 100 test(s) ran on main, 101 on the PR; 1 new test(s) pass, 101 unchanged (1 of them skipped on both sides).
? What you should do: Do not approve as is. Read 'What changed in behavior' and decide with the PR author.

Demo helper
These notes are background from the console and the daily check. They do not change the verdict.
If setup fails, the helper retries the install up to 2 times. If a test still can't be verified because something is missing or fails to import, it looks up the cause, installs the fix on both sides and reruns that step, up to 3 tries.
