Reviewer report: pytoolz/toolz#658: Fix bytes and bytearray source keyword signatures
Run toolz-658, tested 2026-11-05 11:40 IST by ops/daily_run.py (route source-pair).
Proof-of-Change commit 985a7eade681b1d88256d5a185e129da53855144. Report generated 2026-11-05 11:47 IST by reports/pr_report.py.
Baseline: full (test comparison + claim probes + coverage gate + claim flagging (differential probes shown, informational)).
COULD NOT VERIFY
Recommended action: Re-run Confidence: Low
The run did not produce a usable comparison, so there is no conclusion about the PR. The run did not finish cleanly, so it says nothing about the PR.
Advice only: Proof-of-Change never blocks a merge and never posts on GitHub.

Summary in plain English
? What it says it does: Fix bytes and bytearray source keyword signatures (pytoolz/toolz#658).
? What we observed: not verified: no AI-written probe ran any changed line, so the change itself was not exercised by a probe; 4 test(s) fail on main and pass on the PR; 7 test(s) ran on main, 9 on the PR; 2 new test(s) pass, 3 unchanged; probe model-probe1 is not_adequate (the probe crashed or printed no parsed output on every main-side run; not counted as ran or adequate); its matching results do not count.
? What you should do: Do not decide yet. Fix the problem under 'How to fix' and run the check again.

Demo helper
These notes are background from the console and the daily check. They do not change the verdict.
If setup fails, the helper retries the install up to 2 times. If a test still can't be verified because something is missing or fails to import, it looks up the cause, installs the fix on both sides and reruns that step, up to 3 tries.
? Setup check: GitHub token: present.
? Setup check: Nebius token: present.
? Setup check: free memory 7.8 GB (of 15.6 GB).

? Setup check: free disk 94.5 GB.
? Demo helper: git is installed.
? Demo helper: python3 is installed.
? Demo helper: uv is installed.
? Looked up with Tavily: [redacted] results
